IT BEGAN  
WITH A VISION...

THE PREMIUM SUPPLIER  
IN THE INDUSTRY

high to very high  
temperatures

up to IP 67

aggressive industrial  
atmosphere

UV radiation

### Our Vision

As the market leader, our goal is to serve the industry holistically with high-quality LED industrial luminaires. In doing so, our focus is on the niche area of high requirements.

### Our Mission

We always have one ear to the customer and the other to the LED market. This enables us to respond to the individual needs of customers and at the same time not miss any developments in the market. This is how we manage to design unique solutions for the industry, making us an indispensable and sustainable partner.

### Your expert for Industrial Lighting

We at tempLED develop and produce high quality LED lights for demanding applications in the industry. Our specialty is high requirements that the normal LED luminaire manufacturer shies away from. These include large mounting heights, very high levels of contamination, and high and ultra-high temperature ranges up to +110 degrees Celsius.

Premium lighting technology that can withstand any situation.

# THE PATH IS THE TRUE DESTINATION

manufacturer.

We deliver stock  
articles in 72h.

Recycling rate of lu-  
minaires over 90%.

This is what we stand for  
the tempLED manager

# OUR SERVICES

# EVERYTHING FROM ONE SOURCE

## Customized Product Development

We do not produce off-the-shelf luminaires. We are constantly developing ourselves and our products - also thanks to the many individual wishes of our customers.

## Lighting Design

Based on the analysis at your site, we plan, calculate and visualize your light - both individual rooms and complex lighting situations.

## Personal Contact

We are at your side with a personal advisor from the very beginning, but also after the completion of a project. A partnership based on trust and respect is particularly important to us.

## Mediation of Contractors

We guarantee the performance and service and you have time to finance the project.

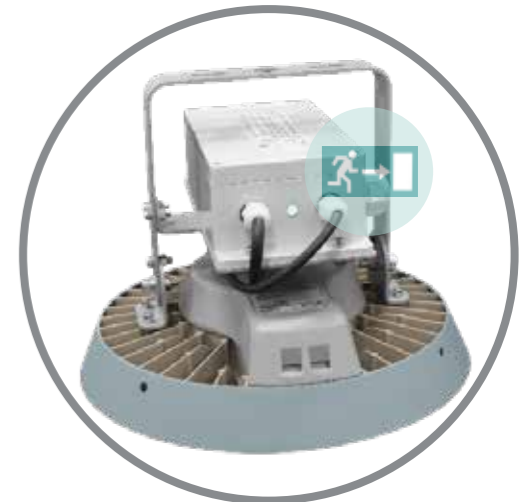

## Smart Lighting

In addition to our lights, we also offer radio controls, such as Casambi, Nedap and Zigbee, as well as motion sensors for automatic control of the lights.

## Emergency Lighting

We arm you against unexpected failures of your luminaires: be informed immediately from the comfort of your office when a luminaire fails.

## Project Planning

We plan your lighting project in all project phases, starting with an overall analysis on site.

## Professional assembly

Leave structural and electrical details to our reliable installation partner - the tempLED Service Center - with whom we cooperate closely.

# TEMPLER AS PREMIUM MANUFACTURER

## Research

The process of bringing an LED luminaire to market often begins in the market itself. Our teams of experts have been working in the LED industry for many years and are always informed about new technologies and trends. This means we never miss out on any developments in the market. In addition, our project managers value the many exciting discussions with you, our customers, and are thus able to take up your personal ideas and pass them on to our developers. Only through exchange new ideas emerge, and it is from this cycle that we continue to develop ourselves and our products.

We research, develop and produce ourselves!

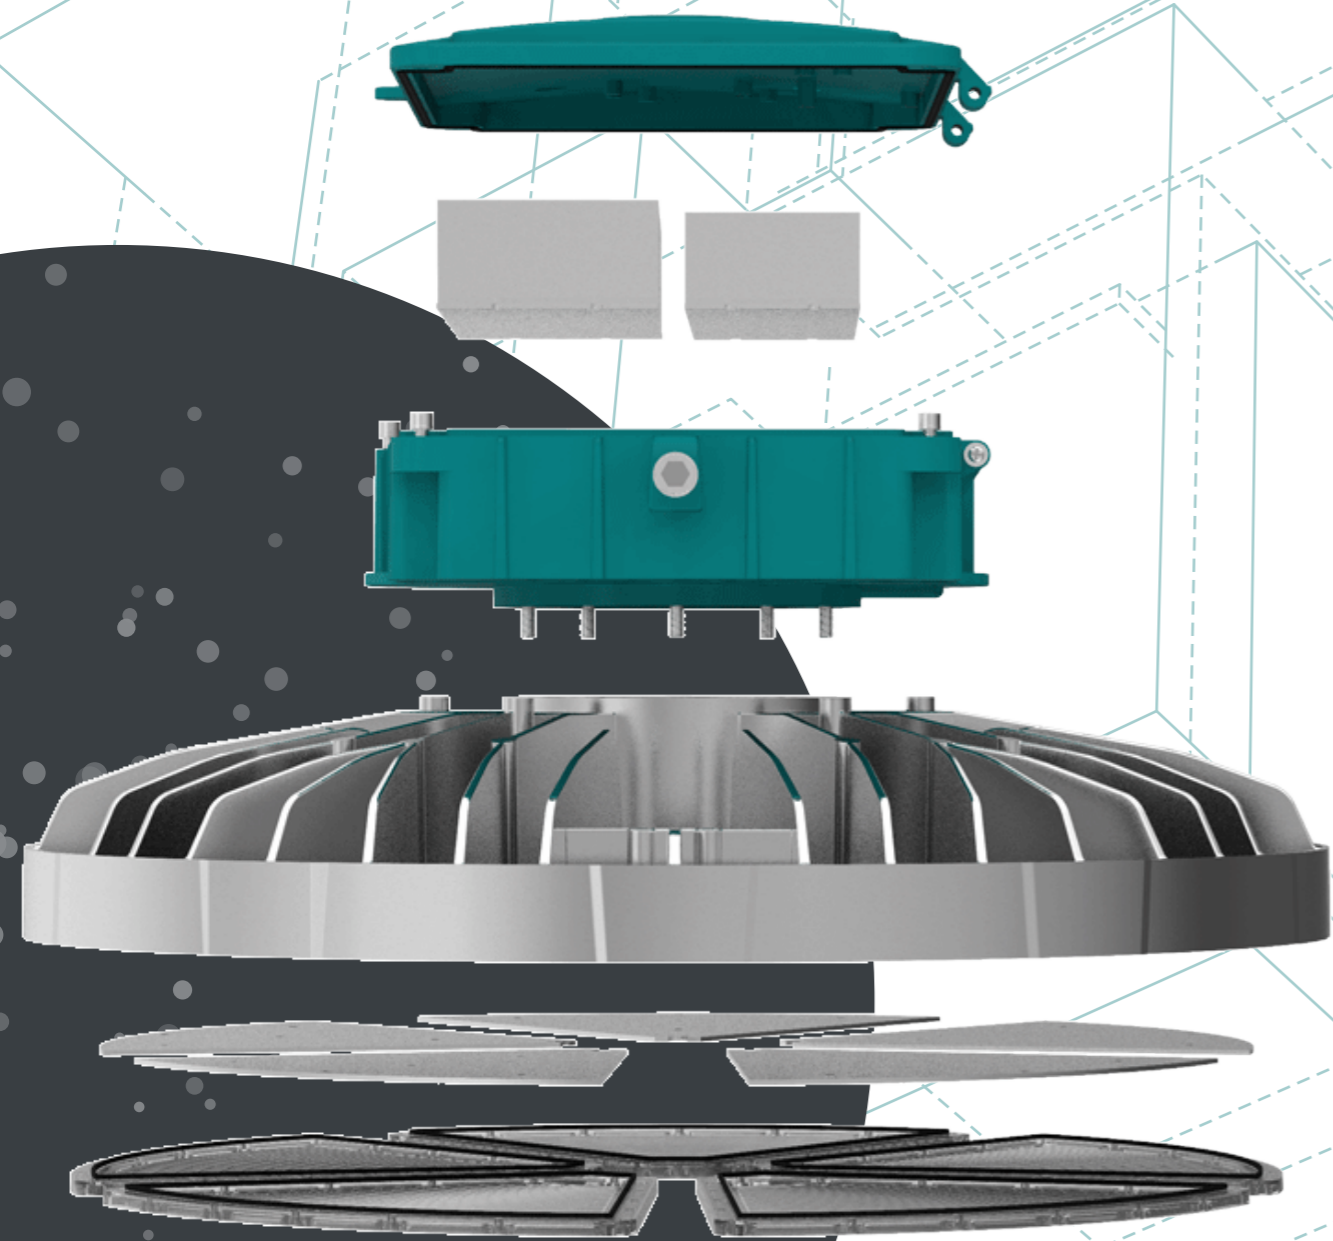

## Development

For the production of premium lighting technology, a large team consisting of experts with a wide variety of backgrounds is committed to the development of our products. Employees with years of experience in the LED industry fiddle over new ideas and design the high-quality LEDs you've come to expect from us. Whether they are technicians, designers or electrical engineers, they all pursue the goal of creating the best possible lighting situation for the customer.

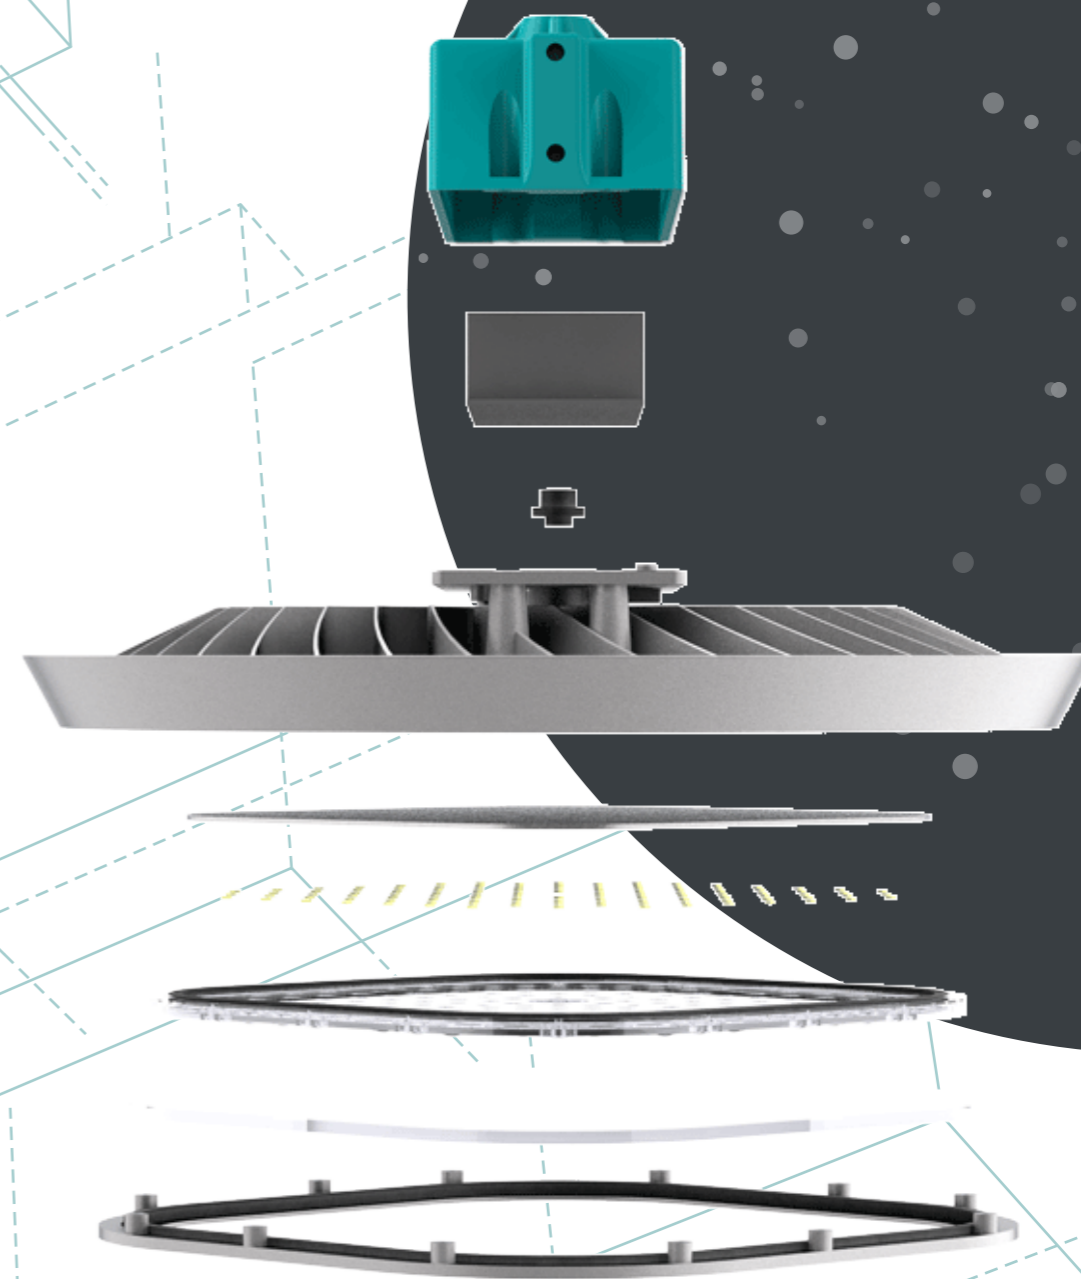

## Confection / Production

Thanks to the high demand on the market, we have been able to record strong growth over the last few years and thus not only expand in terms of personnel, but also move into new locations: In addition to the workshop for smaller conversions, this has also included our own large-scale ready-to-wear location in Austria since 2021. Here, various product families will be made up on more than 1,000 square meters. In addition, a production site in Germany is planned for the coming years.

# Applications

## The delicatessen in the industry

Our specialty: High requirements.

Extreme working conditions require extraordinary luminaires. Just contact us - we will find individual lighting solutions for your needs. We serve a wide variety of industries and do not shy away from any challenges. Only in this way do we continue to develop.

High temperature - high mounting heights - heavy pollution. These are all areas in which we are experts.

„In 1816 we produced cast steel for the first time at ThyssenKrupp. Even today - more than 200 years later - modern production still presents us with challenges. Temperatures of up to 70°C have to be withstood not only by us, but also by the production environment. Thanks to tem-pleD's sustainable luminaires, we not only save money, the lighting efficiency has also improved many times.“

## What our customers say

thyssenkrupp

Customer since 2018

## What our customers say

„Over the years, we have entrusted tempLED with several projects. Very recently, we are having RayLite Pro equipped with the Casambi radio control system. We enjoy the all-around service that tempLED provides. The additional options, such as the Casambi radio control, also make our planning much easier.“

Our Customer:

LED IS SUSTAINABLE.  
LED IS THE FUTURE.

tempLED luminaires are modular in design. All essential components are replaceable. This makes the luminaires a long-lasting investment. Individual components of different materials can be separated, which makes it easy to dispose of raw materials according to their type.

Finally, it's no secret that using LEDs saves 60-90% energy.
